

## Statement of Understanding before Work

This agreement is between Geovital, trading name of Blue Remora Pty Ltd  
ACN 092 305 961 (hereafter called the CONTRACTOR), and  
\_\_\_\_\_ of \_\_\_\_\_  
(hereafter called the CLIENT)

The CONTRACTOR is experienced in performing home assessments for low-level radiation and geopathic stress, and consulting on appropriate protection measures in accordance with Geovital Academy's 30 years of patient-oriented experience in this field.

A home, office or bedroom assessment may include any or all of the following:

- an overview of radiation exposure and how it may affect health
- assessment of radiation in daytime areas and / or assessment of radiation in bedroom areas
- giving advice about radiation avoidance from appliances and lighting
- testing to investigate the wiring source responsible
- if radiation exposure commonly found in the bedroom is present, this may require:
  - turning electrical circuits on-and-off multiple times and
  - assistance from the CLIENT (i.e. taking measurements);
- based on the findings, consultation about suitable solutions and products (if in Geovital's experience they are indicated) and
- the opportunity to order products the CLIENT desires.

The CLIENT agrees to the following:

- payment for services rendered will be made before or at the conclusion of the assessment.
- if the electrical system seems unsafe or outside the scope of a typical residential system, that the CONSULTANT may choose not to include this as part of the assessment and that this does not mean a reduction in the assessment cost.
- Geovital or the CONTRACTOR cannot be held responsible for faults or damages developed as a result of turning electrical circuits on-and-off; or for faults or damages caused by installation of products by the CLIENT, or third party professionals (electricians, painters, builders, etc.).

- the assessment findings and recommendations are not medical advice, treatment or a cure for any medical condition. (The aim is to remove health burdens.)
- the outcome yet to be experienced by the CLIENT as a result of putting a recommended approach into practice, or products into place, can never be predicted or promised.
- the assessment is a snapshot of the current situation and no liability for its accuracy in the future can be taken by the attending CONTRACTOR, or by GEOVITAL or its representatives.

The CLIENT has requested the CONTRACTOR to perform assessment services and consult on suitable counter measures, based on Geovital's experience and opinion as a natural health clinic (based in Austria). It is understood that this means that governmental allowable exposure limits play no role in this advice as they are set too high in the opinion of Geovital and many other experts in this field.

Whilst the CLIENT agrees to be consulted on suitable shielding products, there is no obligation to purchase any of the products upon completion of the assessment. Payment of the assessment fee is completely separate from the purchase of recommended products.

The CONTRACTOR's aim is to reduce radiation exposure. The level of exposure reduction achieved, can however not be guaranteed, as radiation can sometimes behave in unexpected ways, counter measures may be poorly applied by the client or exposure levels may change.

The CONTRACTOR and GEOVITAL wish to make it clear that Geovital has experienced poor results when testing substitute products. This has been the driving force for the creation of Geovital's own products. The recommendations made to you are in relation to Geovital approved products only; the successes that Geovital's reputation is built on are unlikely to be achieved with substitutes.
